

## Overview

Secabo Super Brilliant Sublimation Transfer Paper with fast drying time and high color transferability. Specially designed for sublimation transfer of high resolution photos and images onto hard substrates, i.e. coated metal sheets, wood or table tops, mugs, etc. Our special coating ensures instant drying, very high color transfer, short transfer time and fantastic image quality at low or high transfer temperature and time. Products made with Secabo Super Brilliant Sublimation Transfer Paper amaze with a dimensional effect resulting from the deep, rich blacks, brilliant colors and fine details. PU = 100 sheets

**Advantages**

- Absolute top quality for transfer to all sublimation products
- Perfect contour sharp print result with excellent color transfer, intense brilliant colors.
- The paper can be used immediately after printing, no drying phase required, stackable.

**Features**

- Compatible with Epson, Ricoh and Sawgrass small format printers
- Instant dry
- High print quality and high optical densities
- Very high transfer rates and uniform release
- Very good stability of the sheets
- Porosity > 100ml/min.

## Technical Data

|                        |                           |
|------------------------|---------------------------|
| paper size             | A3                        |
| thickness              | 143 $\mu\text{m}$         |
