

Overview

The practical suction cups from Secabo serve an even better way of working. This means that even smaller transfer press models remain exactly in place. Work even more precisely with this practical little helper. The practical set of 4

Secabo suction cups is made of flexible plastic. The inconspicuous universal geniuses find optimal use in the attachment of our Secabo transfer presses TC1 or TC2 and are ideal for many smooth surfaces. Thus, the devices always remain securely and non-slip attached to the desired location. Attaching the suction cups is child's play. Simply push them through the drill holes on the end sides of the press and screw them tight. This keeps all substrates free of drill holes and your workflow as precise as possible. Nothing shifts or jerks even after the pressing process. The suction cups have a diameter of 75 mm each with a stainless steel thread M6x12 mm + knurled nut M6 in black. This can hold a weight up to 10 kg permanently. The thread is a M6 and 12 mm long. Scope of delivery 1 x suction cup 75mm with stainless steel thread M6 x 12 mm | black 1 x knurled nut Ø15 mm | thread Ø M6 | white
